AZURE WEB APP LOGGING

Login to Azure Portal

Step 1: Create a Basic Windows WebApp.

- Open the Default Domain and check if it's working.

Step 2: Go to WebApp Service Page, Scroll Down and Click on App Service Logs.

- Turn off Application logging (Blob), The logs can be stored in our Storage Account also.
- Select the Web Server Logging to File System.
- Enter the Maximum Quota and Retention Period (the amount of time that an organization holds onto information).
- Click on Save.
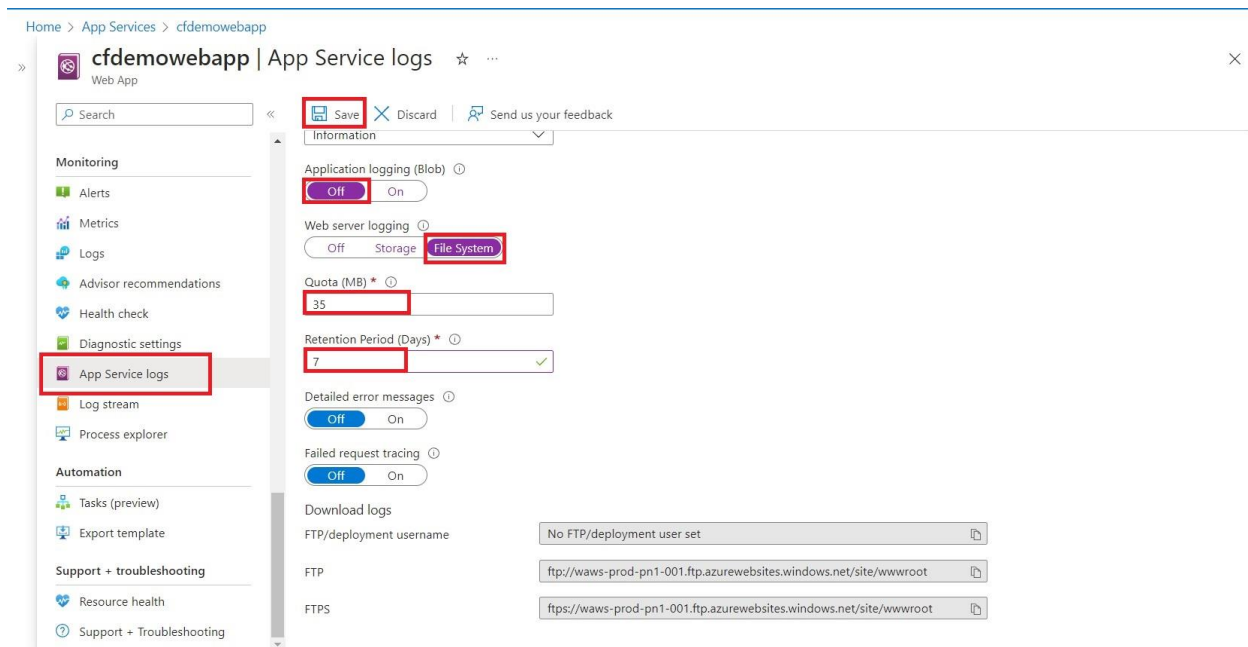

Step 3: On the Azure portal, there is a log stash where you can stream the logs right from your web browser. It is called the Log stream. You'll see that you are connected to log-stream service.
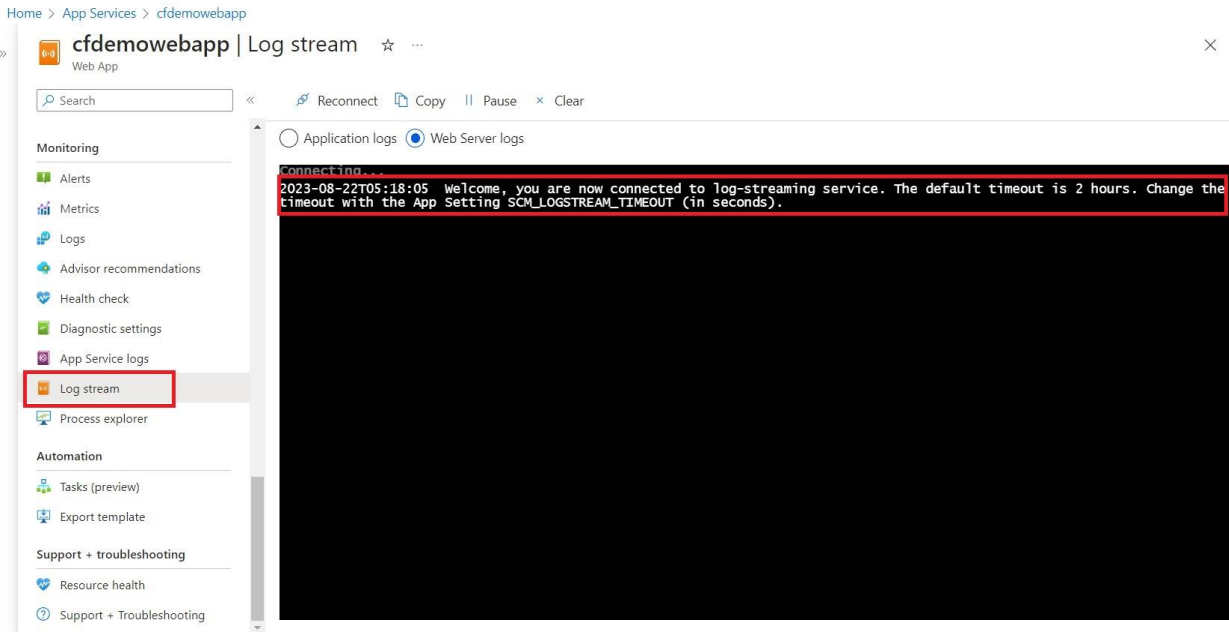

Step 4: We are using the Default.html Page here. Reload the Web Page And let's check our log

Step 5: Just navigate to the Log stream settings pane, and admire your very own logs.

○ Application logs ● Web Server logs
